

Get The Right Answer With Design of Experiments

A course
of at least
2-days duration

Ad Hoc Activity or Designed Experiment ?

We Use The Latter !

Finding solutions to difficult problems can be challenging.

Using inadequate techniques can at best be a waste of time and at worst might yield a misleading conclusion which could be costly.

Design of Experiments is the best practice technique for finding solutions to problems where a variety of contributing factors exists.

This course introduces all the practical aspects of Design of Experiments.

We start with processes where there may only be two input factors. We then extend the techniques to cover multi-factor situations.

Modern software makes the creation and analysis of a Designed Experiment straightforward and accessible to non-statisticians.

This training can be customised to suit a range of requirements. Simply give us a call and we can devise the solution you need.

Participants should have access to a PC in the training room with Minitab and preferably also Excel pre-installed. If you don't have such a facility we can help you. The PC's do NOT have to be networked

We encourage students to bring their own data sets (if possible) which we can work on.

The price of this training does not include Minitab Software. A fully functional free 30 day trial is available from www.minitab.co.uk

Comprehensive course manuals are provided.
